SERVICE LIFE STATMENT

This is to certify that:

PAB AKRAPOVIĆ d.o.o.
MOST 26
52420 BUZET
CROATIA

PAB helmets and their components (including visors and goggles) are very resistant to aging, with an expected service life of 10 years, but only if provided that they are used, stored, maintained and serviced properly. If the helmet is used as an electrically insulating helmet, the obsolescence period is 5 years. Exposure to extreme temperatures, strong impacts, corrosive chemicals, flames or aggressive environments have a significant impact on the shelf life of the product.

The conditions of storage are an important factor for the conservation of electrical and mechanical performance of insulating helmets. Before first use and between successive uses the electrically insulating helmets should be stored in a suitable box or container. They should not be compressed or stored close to any source of heat. It is recommended that the storage temperature is kept in the range $20^{\circ}\text{C} \pm 15^{\circ}\text{C}$.

Inspect and clean carefully the helmet after each use and replace any damaged parts or products. To ensure a lifetime as long as possible please follow the instructions, information and recommendations stated in this user manual.

When the helmet or its parts become obsolete or irreparably damaged, the helmet and its parts shall be treated as ordinary non-hazardous industrial waste according to local regulations.
